This guide includes technical information to help you quickly choose a driver. Vode uses a variety of drivers to meet the requirements of each LED product. Drivers are selected and programmed depending on rail type, power requirements, dimming protocols and LED type. If a specific driver data sheet is required, please contact Vode or your Vode agent.

Vode supplies 18 AWG multi-core wire harnesses for all driver to rail connections (except Vode ZipWave™ | 707). Vode does not approve the use of other wiring, doing so will void your warranty. All drivers provided are equipped with a luminaire quick disconnect on the line voltage power side.

Vode LED Boards

Zipper Board™

Low power LEDs with a 0.16" (4mm) pitch. A variety of optics are available for each system.

Button Board™

High power LEDs with a 1.5" (38mm) to 2" (51mm) pitch, depending on the product. Optics are included to control the beam angle.

Driver and Wiring Information

Unless otherwise requested, one driver per rail will be supplied. NOTE: DoubleBox™, DoubleRace™, Dual Direction ZipThree® Wall Mount and ZipThree® Ceiling Cable are considered two rails in one and will be provided with two drivers.

Programmed Output & Wattage

If your lumen or power (W) requirements are not met by Low, Standard, or High Output Vode can program the driver to adjust the lumen output and system wattage. Please contact Vode or your Vode agent for details.

All drivers are universal 120v-277v with the exception of AH2: Lutron 2-wire, which is only available in 120v.

Constant Current Drivers

LED drivers come in two types: constant current and constant voltage. Constant current drivers provide a predetermined amount of current (amps) and vary the output voltage according to demand. Constant voltage drivers provide a constant voltage and vary the current load. Vode uses constant current drivers for the reasons below:

Design

Preset current allows for precise control of light output.

Dimming

0.1% dimming levels are possible through the combination of current reduction and pulse width modulation (PWM).

Flickering

Constant current greatly minimizes visible flicker.

Reliability & Efficiency

The constant current design eliminates inefficient regulator components, increasing overall system efficiency.

Remote Power

What is remote power?

Locating the power supply (*LED driver*) away from the fixture.

Benefits

- Allows minimum fixture profile
- Remove heat from fixture, extending the life of the LEDs
- Remove heat generating device from conditioned space
- Drivers can be grouped in a single location, making installation, control wiring and maintenance easier.

Features

•Drivers can be located up to 100' (30.5 m) away from fixture. Consult driver specifications for exact length. Remote distance is calculated using Vode provided 18 AWG wire harness.

How does Vode supply Remote Power?

- Remote drivers come in two styles: remote brick power supply and remote linear power supply.
- Remote brick power supply is a 4.32" x 3.37" x 0.078" Galvanized Steel mounting plate that fits all 4" square J-Boxes.
- Remote Linear power supply is 20.7" x 2.375" x 2.53", 0.054" formed Galvanized Steel with five (5) knockouts: (4) 1-1/8", (1) 7/8" and (1) 9/16"

Remote Linear Power Supply

One remote power supply housing is supplied with each power supply. All Vode remote linear drivers come in a 1/16" (0.8mm) formed Galvanized Steel power supply housing with five (5) knockouts: (4) 1-1/8", (1) 7/8" and (1) 9/16". Accommodates standard linear power supplies.

Remote Power Continued

Remote Brick Power Supply

Supplied for some remote power applications. One remote power supply housing is supplied for each rail. Provided driver mounting plate fits all standard 4" square J-Boxes (*J-Box not provided*). Vode recommends 21 cubic inches as the minimum J-Box size, 4" x 4" x 1.5".

4" square J-Box
(provided by others)

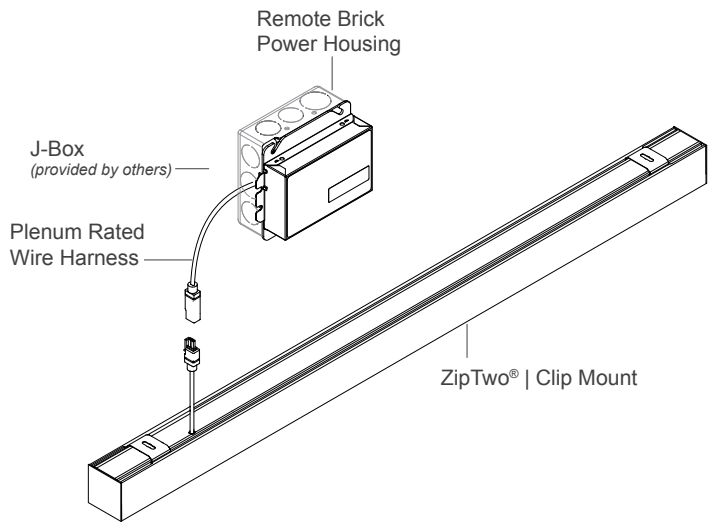

For driver dimension see **Driver Information** section.
Dimension varies depending on driver type.

Remote Power Continued

Vode typically supplies one single-output driver per fixture which allows each fixture to be controlled independently. Two single-output drivers are supplied per dual fixture which allows direct and indirect lighting on the fixture to be controlled independently.

Note: Drawings not to scale, for reference only.

One single output **Driver** powering
One single direction **Fixture**

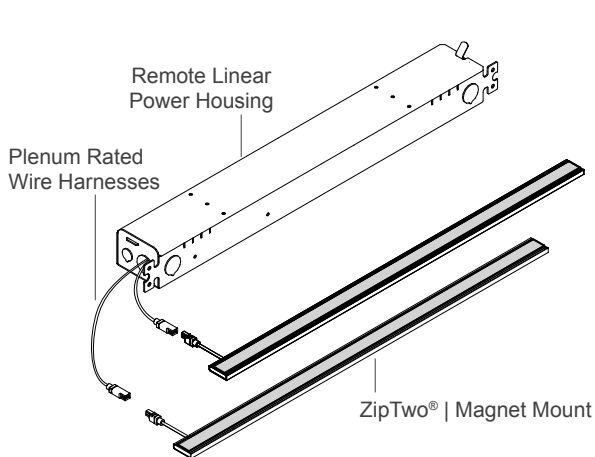

Two single output **Drivers** powering
One dual direction **Fixture**

Optimizing Power

Depending on system configurations and power requirements, power can be optimized. Installation cost can potentially be reduced by using multiple output drivers. Up to 4 fixtures can be powered off one 4-output driver, depending on project requirements. Vode uses 2 & 4 output drivers to optimize power.

IMPORTANT: Each fixture will still require individual wire harnesses, as shown below

Note: Drawings not to scale, for reference only.

One 2-output **Driver** powering
Two single direction **Fixtures**

One 4-output **Driver** powering
Four single direction **Fixtures**

Mounting Remote Power

Maximum remote driver distance depends on the driver type selected. Many drivers can be installed up to 100' (30.5 m) from the fixture. Vode typically supplies a 25' (7.6 m) wire harness, unless otherwise requested.

IMPORTANT: Do not exceed maximum allowable distance as detailed per driver type.

Note: Drawings not to scale, for reference only.

Two single output **Drivers** powering
Two single direction **Fixtures**

One 2-output **Driver** powering
Two single direction **Fixtures**

Mounting Remote Power Continued

Where can it be mounted?

Remote Power can be located in a variety of spaces. Since power is located away from the fixture it can be mounted in a variety of spaces adding ease of installation and driver maintenance.

Drywall Integration

Remote power housings can be installed in one location for ease of installation and maintenance. Vode's plenum rated wire harness is easily installed to bring power from housing to fixtures. Check local building code to determine if conduit is required.

Note: Drawings not to scale, for reference only.

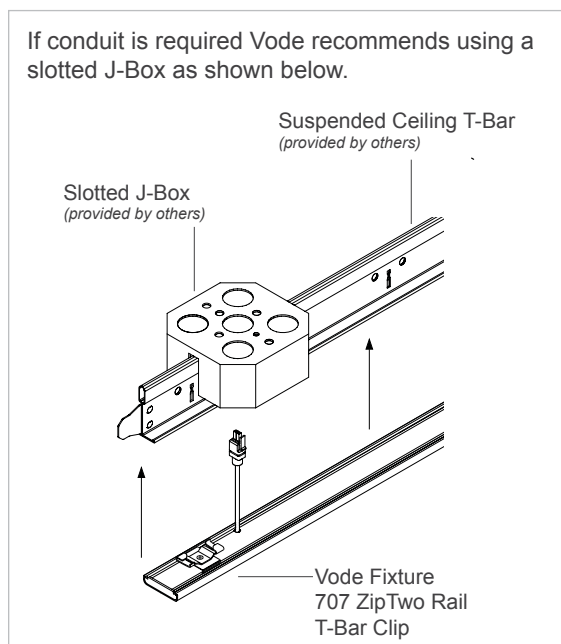

Mounting Remote Power Continued

Suspended Ceiling Integration

Remote Power housing can be installed above ceiling grid to allow for ease of installation, access, and maintenance. Plenum rated wire harness is easily installed to bring power from housing to fixtures without having to use conduit. Check local building code to determine if conduit is required.

Note: Drawings not to scale, for reference only.

Mounting Remote Power Continued

Hard Surface Integration

J-Box Mounting

Remote power can be installed in a variety of locations when being integrated into a hard surface including mounting directly to the surface.

Note: Drawings not to scale, for reference only.

Strut Mounting

Many Vode fixtures and remote power housing can be mounted directly onto strut, as show below.

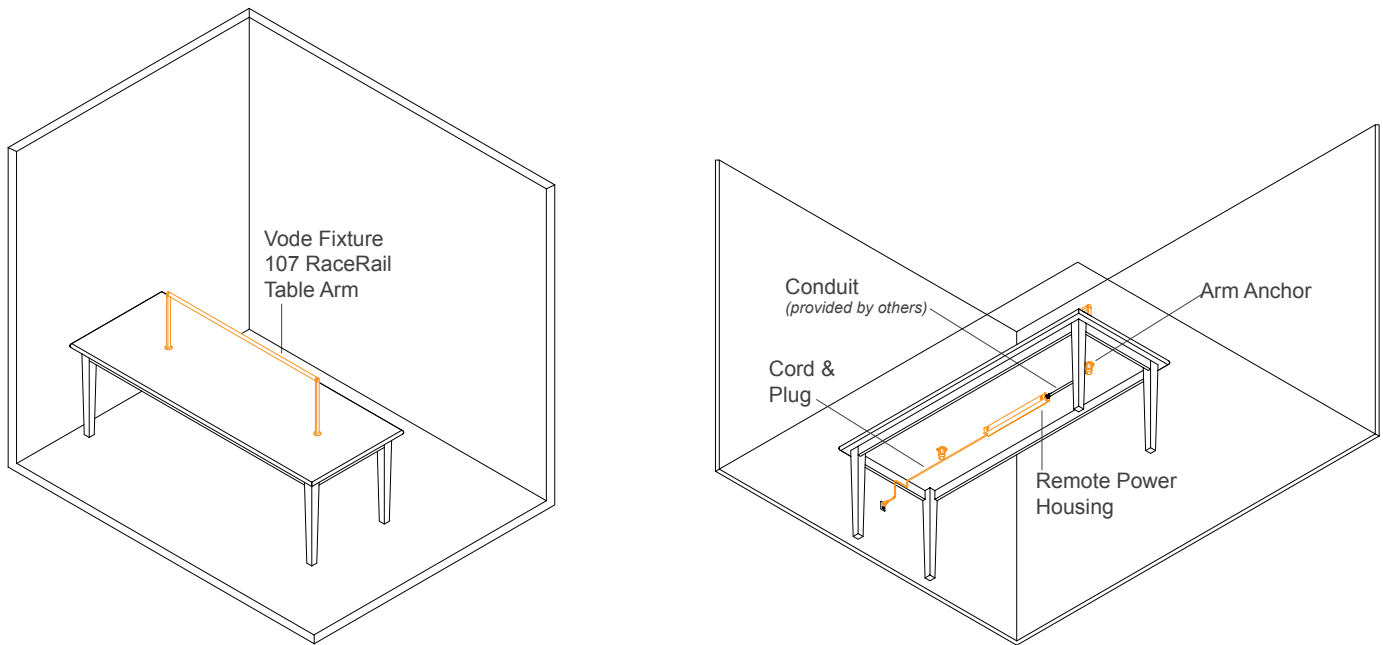

Mounting Remote Power Continued

Furniture System Integration

Remote power allows the power housing to be easily hidden in furniture systems. For Table Arm applications the power can be mounted under the furniture system, as shown below. The example below uses a cord and plug which allows the tables to be rearranged as needed without having to re-wire the fixtures.

Note: Drawings not to scale, for reference only.

Remote power housing can integrate into library stacks. In the example below the drivers are installed below the stack and Vode's plenum rated wire harness brings power to the fixtures at the top of the stack.

Input Wattage and Voltage for all Vode Systems

The chart below shows the input wattage and voltage information for Vode systems. To select a driver, use below system specs. Contact Vode for any assistance required for specifying your system.

Remote Power

AE | eldoLED 0-10v, 1.0% Dimming

0-10v Dimming, what is it?

0-10v dimming is an analog system that uses DC voltage to control the light output levels. This is one of the earliest dimming systems that was adapted from fluorescent fixtures to work with LED technology, and is now one of the simplest and most widely adopted control systems in the US market.

The DC voltage control signal can range between 0-10v. At 0 volts the light fixture is dimmed down to the lowest level allowed by the driver, and at 10 volts the light fixture is at its brightest level. Vode's AE drivers will dim down to 1.0% light output, while AT driver will dim down to 0.1% output.

Driver Compatibility for All Vode Families

Driver compatibility is determined by rail type, output and rail lengths. See the chart below for driver compatibility with your rail section lengths. **Vode provides a 25' wire harness for remote power unless otherwise noted.**

IMPORTANT: Vode uses a variety of drivers to meet specific requirements of each LED product. Due to differing wattage or voltage of each rail, different drivers may be required in order to properly operate each rail type.

Technical Specifications for eldoLED ECOdrive **75B-M1A0A** (75W)

See eldoled.com for more information

Dimming Control: 0-10v (isolated)

Dimming Range: 100% to 1.0%

Dimming Curve: Driver dimming curve is factory preset to linear. Logarithmic is available upon request

Dimming Type: Analog, hybrid of constant current reduction (CCR) and pulse width modulation (PWM)

Wattage: 75W

Input Voltage: Universal 120-277V, 50/60 Hz.

Type: Constant current, Class 2

Operating Temperature: -20°C to 50°C (-4°F to 122°F)

LED output current range: 700 - 2,100 mA

Output: 1x (2-55V)

Remote Distance: Up to 100' (30.5m) from LED source

Driver Wiring Information

NOTE: Driver not drawn to scale

Optimized Driver Offerings

Vode offers optimized driver options to allow for the reduction of the number drivers provided per system. Driver requirements can vary depending on system configurations and/or power requirements and will be different than 1 to 1 power offerings.

The below drivers are only supplied with optimized driver system requests. Please request submittal drawings for exact driver specifications supplied with your order.

Technical Specifications for eldoLED SOLOdrive **30U-M2Z0A** (30W)

See eldoled.com for more information

Dimming Control: 0-10v (isolated)
Dimming Range: 100% to 1.0% (factory programmed from 0.1%)
Dimming Curve: Driver dimming curve is factory preset to linear. Logarithmic is available upon request
Dimming Type: Analog, hybrid of constant current reduction (CCR) and pulse width modulation (PWM)
Wattage: 30W
Input Voltage: Universal 120-277V, 50/60 Hz.
Type: Constant current, Class 2
Operating Temperature: -20°C to 50°C (-4°F to 122°F)
LED output current range: 150 - 1,400mA
Output: 2 x (2-55V)
Remote Distance: Up to 100' (30.5m) from LED source

AT | eldoLED 0-10v, 0.1% Dimming

0-10v Dimming, what is it?

0-10v dimming is an analog system that uses DC voltage to control the light output levels. This is one of the earliest dimming systems that was adapted from fluorescent fixtures to work with LED technology, and is now one of the simplest and most widely adopted control systems in the US market.

The DC voltage control signal can range between 0-10v. At 0 volts the light fixture is dimmed down to the lowest level allowed by the driver, and at 10 volts the light fixture is at its brightest level. Vode's AE drivers will dim down to 1.0% light output, while AT driver will dim down to 0.1% output.

Driver Compatibility for All Vode Families

Driver compatibility is determined by rail type, output and rail lengths. See the chart below for driver compatibility with your rail section lengths. **Vode provides a 25' wire harness for remote power unless otherwise noted.**

Remote Power

Wattage: 75W

Input Voltage: Universal 120-277V, 60 Hz.

Type: Constant current, Class 2

Operating Temperature: -20°C to 50°C (-4°F to 122°F)

LED output current range: 150 - 1400 mA

Output: 2x (2-55V)

Remote Distance: Up to 100' (30.5m) from LED source

Driver Wiring Information

NOTE: Driver not drawn to scale

IMPORTANT: Vode uses a variety of drivers to meet specific requirements of each LED product. Due to differing wattage or voltage of each rail, different drivers may be required in order to properly operate each rail type.

Standard System Driver Specification for eldoLED SOLOdrive **75B-M2A0A (75W)**

NOTE: Driver indicated below is what will be provided for a standard Vode rail. Modified orders could be supplied with an alternate driver. Please contact your Vode representative for more information.

Optimized Driver Offerings

Vode offers optimized driver options to allow for the reduction of the number drivers provided per system. Driver requirements can vary depending on system configurations and/or power requirements and will be different than 1 to 1 power offerings.

The below drivers are only supplied with optimized driver system requests. Please request submittal drawings for exact driver specifications supplied with your order.

Technical Specifications for eldoLED SOLOdrive **30U-M2Z0A** (30W)

See eldoled.com for more information

Dimming Control: 0-10v (isolated)
Dimming Range: 100% to 0.1%
Dimming Curve: Driver dimming curve is factory preset to linear. Logarithmic is available upon request
Dimming Type: Analog, hybrid of constant current reduction (CCR) and pulse width modulation (PWM)
Wattage: 30W
Input Voltage: Universal 120-277V, 50/60 Hz.
Type: Constant current, Class 2
Operating Temperature: -20°C to 50°C (-4°F to 122°F)
LED output current range: 150 - 1,400mA
Output: 2 x (2-55V)
Remote Distance: Up to 100' (30.5m) from LED source

AD | eldoLED DALI, 0.1% Dimming

DALI Dimming, what is it?

DALI, or Digital Addressable Lighting Interface, is a low voltage dimming system that enables two-way communication between the controller and LED driver. Once the hardware has been installed, the system can be commissioned and addresses can be assigned. Devices are addressed independently or grouped depending on the type of control desired for a space. Digital lighting control allows for greater flexibility of a lighting system and its controls integration.

A global standard for DALI originated in Europe and has been adopted to the US market. The DALI standard is an open protocol, non-proprietary control system that allows for interoperability between manufacturers devices.

Driver Compatibility for All Vode Families

Driver compatibility is determined by rail type, output and rail lengths. See the chart below for driver compatibility with your rail section lengths. **Vode provides a 25' wire harness for remote power unless otherwise noted.**

Optimized Driver Offerings

Vode offers optimized driver options to allow for the reduction of the number drivers provided per system. Driver requirements can vary depending on system configurations and/or power requirements and will be different than 1 to 1 power offerings.

The below drivers are only supplied with optimized driver system requests. Please request submittal drawings for exact driver specifications supplied with your order.

Technical Specifications for eldoLED SOLOdrive **30U-M2Z0D** (30W)

See eldoled.com for more information

Dimming Control: Digital Addressable Lighting Interface (DALI-2)

Dimming Range: 100% to 0.1%

Dimming Curve: Driver dimming curve is factory preset to linear. Logarithmic is available upon request

Dimming Type: Analog, hybrid of constant current reduction (CCR) and pulse width modulation (PWM)

Wattage: 30W

Input Voltage: Universal 120-277V, 50/60 Hz.

Type: Constant current, Class 2

Operating Temperature: -20°C to 50°C (-4°F to 122°F)

LED output current range: 150 - 1,400mA

Output: 2 x (2-55V)

Remote Distance: Up to 100' (30.5m) from LED source

Driver Wiring Information

NOTE: Driver not drawn to scale

Technical Specifications for eldoLED SOLOdrive 560/L (50W)

See eldoled.com for more information

Dimming Control: Digital Addressable Lighting Interface (DALI-2)

Dimming Range: 100% to 0.1%

Dimming Curve: Driver dimming curve is factory preset to linear. Logarithmic is available upon request

Dimming Type: Analog, hybrid of constant current reduction (CCR) and pulse width modulation (PWM)

Wattage: 50W

Input Voltage: Universal 120-277V, 50/60 Hz.

Type: Constant current, Class 2

Operating Temperature: -20°C to 50°C (-4°F to 122°F)

LED output current range: 150 - 1,400mA

Output: 2 x (2-55V)

Remote Distance: Up to 100' (30.5m) from LED source

Driver Wiring Information

NOTE: Driver not drawn to scale

Technical Specifications for eldoLED SOLOdrive 760/L (75W)

See eldoled.com for more information

Dimming Control: Digital Addressable Lighting Interface (DALI-2)

Dimming Range: 100% to 0.1%

Dimming Curve: Driver dimming curve is factory preset to linear. Logarithmic is available upon request

Dimming Type: Analog, hybrid of constant current reduction (CCR) and pulse width modulation (PWM)

Wattage: 75W

Input Voltage: Universal 120-277V, 50/60 Hz.

Type: Constant current, Class 2

Operating Temperature: -20°C to 50°C (-4°F to 122°F)

LED output current range: 150 - 1,400mA

Output: 2 x (2-55V)

Remote Distance: Up to 100' (30.5m) from LED source

Driver Wiring Information

NOTE: Driver not drawn to scale

Technical Specifications for eldoLED SOLOdrive 1060/M (100W)

See eldoled.com for more information

Dimming Control: Digital Addressable Lighting Interface (DALI-1)
Dimming Range: 100% to 0.1%
Dimming Curve: Driver dimming curve is factory preset to linear. Logarithmic is available upon request
Dimming Type: Analog, hybrid of constant current reduction (CCR) and pulse width modulation (PWM)
Wattage: 100W
Input Voltage: Universal 120-277V, 50/60 Hz.
Type: Constant current, Class 2
Operating Temperature: -40°C to 50°C (-40°F to 122°F)
LED output current range: 200 - 1,050mA
Output: 4 x (2-57V)
Remote Distance: Up to 100' (30.5m) from LED source

Driver Wiring Information

NOTE: Driver not drawn to scale

Technical Specifications for eldoLED SOLOdrive 1065/M (100W)

See eldoled.com for more information

AX | eldoLED DMX, 100-0.1% Dimming

DMX Dimming, what is it?

DMX stands for Digital Multiplex Signal. This is a standard protocol for digital communication in a lighting system and is often used for dynamic color changing LED applications in architectural lighting. Similar to DALI, devices can be assigned addresses and controlled, but DMX can control a larger range of addresses and devices outside of lighting fixtures as well. The system requires dedicated cabling between the controller and the driver and specialized knowledge for commissioning, but it is a highly customizable control system and well suited for sophisticated lighting applications.

Driver Compatibility for All Vode Families

Driver compatibility is determined by rail type, output and rail lengths. See the chart below for driver compatibility with your rail section lengths. **Vode provides a 25' wire harness for remote power unless otherwise noted.**

Remote Power

AH | Lutron, Hi-Lume 1% Dimming EcoSystem, Soft on / Fade to Black Technology, LDE1

Lutron Soft on / Fade to Black, what is it?

Hi-lume 1% EcoSystem LED Drivers with Soft-on, Fade-to-Black provide a high-performance solution for any space, in any application. They provide smooth, continuous dimming down to 1% of full output current, and the Soft-on, Fade-to-Black fades smoothly between 0% and 1% when turned on and off for an incandescent-like experience. These drivers offer continuous, flicker-free dimming from 100% to 1% and accommodates zone and control changes without rewiring.

http://www.lutron.com/TechnicalDocumentLibrary/369832_ENG.pdf

Driver Compatibility for All Vode Families

IMPORTANT: Vode uses a variety of drivers to meet specific requirements of each LED product. Due to differing wattage or voltage of each rail, different drivers may be required in order to properly operate each rail type.

Technical Specifications for Lutron LDE1

See lutron.com for more information

Dimming Control: EcoSystem Digital

Dimming Range: 100% to 1%

Dimming Type: Constant current reduction (CCR) to 5%, Pulse width modulation (PWM) below 5%

Input Voltage: Universal 120-277V, 50/60 Hz.

Type: Constant current, Class 2

Operating Temperature: 0°C to 75°C (32°F to 167°F)

Driver Wiring Information

NOTE: Driver not drawn to scale

Compatible Dimmers

Vode provides this information to help you choose a compatible dimming option for your selected driver. Vode does not supply dimming controls for any system and is not responsible for any controls issues associated with an installation.

IMPORTANT: Specifications are subject to change. Please visit the LED driver manufacturer's website for the most up-to-date specifications and contact information. For any compatibility issue, please contact driver manufacturer.

AH2 | Lutron, Hi-lume 1% 2-wire LED Driver (120V forward phase only)

Lutron Hi-Lume 1% 2-Wire Dimming, what is it?

The Hi-lume 1% 2-Wire LED Driver is a high-performance LED driver that provides smooth, continuous, flicker-free, 1% dimming for virtually any LED fixture. Formerly part of the A-series family, it's the most versatile LED driver offered today due to its compatibility with a wide variety of LED arrays, multiple form factors, and numerous control options.
