

Vode Rail Lengths

Overview of Vode Rail Length availability. Vode offers standard fixture lengths every 12", and also has the ability to offer custom rail lengths.

System 807 Nexa Suspended	15-16
System 907	17

Introduction

This guide includes technical information to help you understand the different rail lengths Vode can supply. Vode has standard offerings of 24", 36", 48", 60", 72", 96", 108", 120", 132" and 144" length rails. The design and manufacturing process of Vode's fixtures allows for custom lengths to be specified. Vode offers rail lengths from 11" to 144".

Vode's LED boards allow for many fixture lengths to be fully illuminated. Some rail lengths will not be fully illuminated and have a light gap. This is when there is no light from the end of the fixture to the first LED. Vode configures LED boards so they are centered in the fixture. Any light gaps that occur will be evenly spaced on each end of the fixture as standard. Gapping can be consolidated at one end of the rail as well. Please contact factory. The following pages break down all the rail length options and highlight any gaps that may occur.

Examples shown below.

Direct & Indirect Fixtures

Indirect Light

For indirect lighting applications, a light gap is less noticeable. For lighting installations where the fixture is not seen, such as an indirect cove with ZipWave, we recommend using standard fixture lengths when possible, as the overlapping light output between fixtures compensates for spacing between them. For non-standard length direct/indirect fixtures, such as our 207 BoxRail, any gapping for the indirect portion is typically not noticeable. Depending on how close the fixture is suspended from the ceiling, the light output from the start of one fixture to the next will fill in resulting in minimal gapping.

Direct Light

For direct lighting, a light gap may be visible for some non-standard fixture lengths. When the fixture is turned on a predetermined portion on **both ends** of the fixture will not be illuminated. Please reference the system specific guide on the following pages to locate the gap size according to fixture length.

System 107

BoxRail, RaceRail, and WingRail are offered in rail lengths up to 72"
DoubleBox and DoubleRace are offered in rail lengths up to 96"
