

Corners and Shapes

Guide to specifying Vode Corners and Shapes. Utilizing corners, Vode systems can be configured into a variety of shapes and sizes, delivering a dynamic look to any lighting application.

Specify the Rail Lengths	7

Introduction

Vode systems can be configured to create corners and shapes. Available shapes are Squares, Rectangles, L and U Shapes, and ZigZag. Currently all shapes are offered with 90° corners only. For additional needs contact your Vode Agent.

Shapes Offered

Corners and Shapes are available with 107 ceiling and wall systems, 707 ZipTwo Systems, and 207 BoxRail Systems.

Square

Rectangle

L-Shape

U-Shape

ZigZag

Hyatt Hotel Headquarters

The Packer Collegiate Institute

System 107

System Code 107

Single/Double Rail 01

Rail Type BX WG RR DB DR

Mounting CA WA CC

Additional Information

1. Arm mount (CA, WA) available.
2. Ceiling Cable (CC) available.
3. 90° Corners only.
4. Corners are not illuminated.
5. Cannot change planes, only change direction horizontally.

Ceiling-Wall Arm Mount (CA/WA)

Square

Rectangle

U & L

ZigZag

Ceiling Cable Mount (CC)

Square

Rectangle

U & L

ZigZag

System 207

System Code 207

Rail Type BX

Additional Information

1. Custom rail lengths not available.
2. 144" rail lengths not available.
3. Fixed Shapes Only: Square, Rectangle, L & U Shapes.
4. Corners are illuminated.
5. Baffles not available.

BoxRail

Square

Rectangle

U & L

System 707

System Code 707

Rail Type Z2

Additional Information

1. Dimensions are taken from the center line (dimensions are nominal and submittal drawings will confirm lengths).
2. 24" rail length minimum.
3. Corners are lit when using standard rail lengths.
4. When specifying 85° Asymmetric, the orientation of the light needs to be noted. Example "into the square or outside the square".

ZipTwo

Square

Rectangle

U & L

ZigZag

System 807

System Code 807

Rail Type NX3 NX5

Additional Information

1. Dimensions are taken from the center line (dimensions are nominal and submittal drawings will confirm lengths).
2. 24" rail length minimum.
3. 144" rail length not available.
4. Corners are lit when using standard rail lengths. See [Rail Length Chart](#) for more details.

L-Shape

ZigZag

How To Specify

Corners and Shapes can be specified through the Vode Spec Builder or Vode Spec Guide using the ZZ options. The code will be placed in the Overall System Length and Rail Length step. Below is a break down of how to specify.

Specify Shape

First go to Overall System Length step and specific desired shape, then use the Rail Length step and enter the lengths associated with your shape.

The shape of the product is specified on the Overall System Length Step. First select “Other Please Specify” and then enter one of the following:

- Square
- Rectangle
- L-Shape
- U-Shape
- ZigZag

The screenshot shows the 'Overall System Length' step in the Vode Spec Builder. The 'System Type' is 'SL - Standard Linear'. The 'Other (please specify)' dropdown is open, and 'Square' is selected. A text input field below contains the word 'Square'.

Square

The screenshot shows the 'Overall System Length' step in the Vode Spec Builder. The 'System Type' is 'SL - Standard Linear'. The 'Other (please specify)' dropdown is open, and 'Rectangle' is selected. A text input field below contains the word 'Rectangle'.

Rectangle

The screenshot shows the 'Overall System Length' step in the Vode Spec Builder. The 'System Type' is 'SL - Standard Linear'. The 'Other (please specify)' dropdown is open, and 'L Shape' is selected. A text input field below contains the words 'L Shape'.

L-Shape

The screenshot shows the 'Overall System Length' step in the Vode Spec Builder. The 'System Type' is 'SL - Standard Linear'. The 'Other (please specify)' dropdown is open, and 'ZigZag' is selected. A text input field below contains the words 'ZigZag'.

How To Specify (Continued)

Specify The Rail Lengths

The desired Rail Lengths are entered in the Rail Length step. First select "Other rail length or layout (please specify)". Then specify the length of each linear portion followed by the corner spec. Write the code as if you were walking on a reflected ceiling plan. When submitting a project you can also submit a drawing of the shape and dimensions you are specifying. The corner spec should be written with a R or L to indicate the direction the fixture should turn and then with a 90 to represent the degree of the angle. If a degree other than 90 is desired, this can be requested in this step. Corner angles other than 90° are considered custom and limitations apply.

Examples

Square: 48

Rectangle: 24, 72

L-Shape: 48, R90, 48

U-Shape: 72, L90, 96, L90 36

ZigZag: 48, R90, 72, L90, 36

If one side of your shape is made up of multiple fixtures lengths state the overall length and then use parentheses to indicate the individual fixture lengths. Example: Rectangle: 144" (48, 48, 48), 72" (36, 48)
